

# Axial piston pumps

variable displacement, mechanical controls

## PVPC

Variable displacement axial piston pumps with swash plate design suited for high pressure open circuits.

They are characterized by low noise emission, short response time and flexible operation thanks to the wide range of mechanical controls, see section [12](#) and [13](#).

For PVPC pumps with electrohydraulic proportional controls, see tech table AS170.

SAE J744 mounting flange and shaft.

(2) For PVPC size 6 the compensator type C can be also used for remote pressure control, see section [13](#)

(3) For PVPC-LW the requested value of torque setting or power and speed must be specified in the pump order, e.g. 70 Nm or 10 kW at 1450 RPM

(4) Optional intermediate displacements 35 and 53 cm<sup>3</sup>/rev are available on request

(5) Pumps with ISO 3019/2 mounting flange and shaft (option /M) are available on request

## 2 GENERAL CHARACTERISTICS

Assembly position - see section 7	Any position. The drain port must be on the top of the pump. Drain line must be separated and unrestricted to the reservoir and extended below the oil level as far from the inlet as possible. Suggested maximum line length is 3 m.
Ambient temperature range	<b>Standard</b> = -25°C ÷ +80°C / <b>PE</b> option -15°C ÷ +80°C
Storage temperature	<b>Standard</b> = -40°C ÷ +70°C / <b>PE</b> option -20°C ÷ +70°C
Surface protection (pump body)	Black painting RAL9005
Compliance	RoHS Directive 2011/65/EU as last update by 2015/863/EU REACH Regulation (EC) n°1907/2006

### 11.3 Response times

Response times and pressure peak due to variation 0% to 100% and 100% to 0% of the pump displacement, obtained with an instantaneously opening and shut-off of the delivery line.

Pump type	T1 (ms)	T2 (ms)
PVPC-*-3029	140	36
PVPC-*-4046	140	42
PVPC-*-5073	160	44
PVPC-*-5090	160	44
PVPC-*-6140	170	100
PVPC-*-6160	180	110

### 11.4 Minimum power/torque setting for PVPC-LW (constant power regulator)

For the pump correct operation, the power / torque factory setting has to be higher than the values reported in the below table. In case of lower power/torque setting values, the regulator limits the maximum working pressure to a value lower than the standard setting.

**Note:** please specify the requested value of torque setting or power and speed in the PVPC-LW pump order, e.g. 70 Nm or 10 kW at 1450 RPM

Pump type	Minimum torque (Nm)	Minimum power (Kw)
PVPC-LW-3029	43	6,7
PVPC-LW-4046	68	10,7
PVPC-LW-5073	113	17,8
PVPC-LW-5090	132	20,7
PVPC-LW-6140	197	30
PVPC-LW-6160	220	34

**Manual pressure compensator**

The pump displacement is zeroed when the line pressure approaches the setting pressure of the compensator.

Compensator setting range:  
 20 ÷ 280 bar for 3029, 4046, 5073  
 20 ÷ 250 bar for 5090

Compensator standard setting:  
 280 bar for 3029, 4046, 5073  
 250 bar for 5090

**CH**

**Manual pressure compensator with venting**

As C plus venting function, when a long unloading time is required and heat generation and noise have to be kept at lowest level.

Venting valve solenoid voltage, see section 4  
 Venting valve OFF = null displacement  
 Venting valve ON = max displacement

Compensator setting range:  
 20 ÷ 280 bar for 3029, 4046, 5073  
 20 ÷ 250 bar for 5090, 6140

Compensator standard setting:  
 280 bar for 3029, 4046, 5073  
 250 bar for 5090, 6140

① solenoid venting valve

**R**

**Remote pressure compensator**

As C, but predisposed with X piloting port for connection of a remote pilot relief valve (1).

Compensator setting range:  
 20 ÷ 280 bar for 3029, 4046, 5073  
 20 ÷ 250 bar for 5090

Compensator standard setting:  
 280 bar for 3029, 4046, 5073  
 250 bar for 5090

**L**

**Load sensing**

The pump displacement is automatically adjusted to maintain a constant (load independent) pressure drop across an external throttle. Changing the throttle regulation, the pump flow is consequently adjusted.

Load sensing control always incorporates an hydraulic compensator to limit the maximum pressure.

Compensator setting range:  
 20 ÷ 280 bar for 3029, 4046, 5073  
 20 ÷ 250 bar for 5090

Compensator standard setting:  
 280 bar for 3029, 4046, 5073  
 250 bar for 5090

Differential pressure setting range: 10 ÷ 40 bar  
 Differential pressure standard setting: 14 bar

**LW**

**Constant power**

In order to achieve a constant drive torque with varying operating pressure. The swashing angle and therefore the outlet flow is varied so that the product of flow and pressure remains constant.

See section 11.4 for min power/torque setting

**Manual pressure compensator**

The pump displacement is zeroed when the line pressure approaches the setting pressure of the compensator.

Compensator setting range: 20 ÷ 280 bar

Compensator standard setting: 280 bar

**Note:** do not modify the setting of differential pressure compensator (1)

(2): The pump max pressure can be remotely controlled as -R control type, connecting the X port to a pilot relief valve. The valve is not supplied with the pump, it needs to be ordered separately

**Manual pressure compensator with venting**

As C plus venting function, when a long unloading time is required and heat generation and noise have to be kept at lowest level.

Venting valve solenoid voltage, see section 4

Venting valve OFF = null displacement

Venting valve ON = max displacement

Compensator setting range: 20 ÷ 280 bar

Compensator standard setting: 280 bar

(1) solenoid venting valve

**Load sensing**

The pump displacement is automatically adjusted to maintain a constant (load independent) pressure drop across an external throttle. Changing the throttle regulation, the pump flow is consequently adjusted.

Load sensing control always incorporates an hydraulic compensator to limit the maximum pressure.

Compensator setting range: 20 ÷ 280 bar

Compensator standard setting: 280 bar

Differential pressure setting range: 10 ÷ 40 bar

Differential pressure standard setting: 14 bar

**Constant power**

In order to achieve a constant drive torque with varying operating pressure. The swashing angle and therefore the outlet flow is varied so that the product of flow and pressure remains constant.

**See section 11.4 for min power/torque setting**
